The idea of having all of the design information on one user's desktop was ahead of its time. Much of AutoCAD's development is credited to its creator, Dave Jones. Jones was working at Boeing when the idea of a computer-aided design system was introduced, and in his spare time he began programming on a digital PDP-11 minicomputer. He used the PDP-11 to help him create the first CAD system, originally named "Cad-2". AutoCAD was first released for MS-DOS and was supported for many years, when a Unix-based graphical interface was introduced in the 1990s, followed by Microsoft Windows in the 2000s. Currently, AutoCAD is available for macOS, Microsoft Windows, and Linux. AutoCAD is also available as a mobile app for Android, iPhone, and iPad. The AutoCAD logo was designed by Tom Hallman Jr. in 1983. The AutoCAD logo was designed by Tom Hallman Jr. in 1983, and originally appeared on the cover of AutoCAD Users Manual for Version 1.0. The earliest versions of AutoCAD operated on a PDP-11 minicomputer and used several keystrokes to move the cursor and draw shapes. In 1981, Cad-2 was replaced by CAD-80 and was a predecessor to AutoCAD. The first version to use a graphical user interface (GUI) was CAD-70 in 1982. The first version of AutoCAD to use mouse-driven graphics (although some keystroke commands were retained) was Version 4.0. In 1981, Jones purchased the rights to CAD-80 for \$75,000. Jones partnered with former partner Michael Kurtz and they later formed Autodesk, Inc. on August 8, 1982. The first version of AutoCAD was CAD-60, which shipped with an average-case 1980-vintage PDP-11/25. A "handcuff" was available, which was a pair
