AutoCAD Review by Andrew Matz, 11/10/14 Andrew Matz has been involved with many Autodesk products throughout his career. He is currently the Director of Business Development for the automotive industry and has been in the industry for nearly 20 years. He currently works in automotive design and engineering at a large manufacturer in the Northeast. AutoCAD, Autodesk's CAD program, has been around since 1982, and has been around for over 30 years as an industry standard CAD system. It has been around long enough that Autodesk has come to realize that it has to continuously develop new products to keep its consumers from having to leave the Autodesk platform. It is also has been around long enough that Autodesk has embraced the idea that in order to keep its consumers from having to leave the Autodesk platform, they have to provide a service to the public on the Web in order to stay relevant. In recent years Autodesk has done this by opening up its software on the Web so that designers can access it from any device via the Web (autocad.com). As a result, Autodesk has been able to make it easier for their customers to purchase the software from the Web. Although the Web has made this easier for Autodesk customers, the ease of purchasing the software has had an unexpected impact on the company. They have found that more and more customers are using the web to order software and other Autodesk products. So, the company has had to rethink

how they go about bringing these products to their customers and how they make money off their software. One of the tools that Autodesk has created in order to bring their customers products online is called "AutoCAD Connect."

AutoCAD's native toolbars are also customizable. Before AutoCAD 2010, the type library was provided only for the VBA API, and did not contain a Type Library (TLB) for any other APIs. In 2010, it was expanded to contain a TLB for the VBA, ObjectARX, .NET and AutoLISP APIs. TLB files are binary files, which store the version and metadata for a type library. The TLB files are imported during the AutoCAD installation process, and can be either automatically installed or manually uninstalled.
