Let A be a valuation ring with quotient field K and with valuation v . Suppose that there is a valuation on K , extending v and having residue field k ; let us call it w . Suppose also that w is a non-analytic extension of v . Is it true that w is analytic? My attempts: First, since v is non-analytic (since k is algebraically closed), it cannot be the case that $v=w$. Second, if v is discrete, w must be discrete, so let us assume that v is non-discrete. Consider now the principal ideal $I=(A,a)$ of A and observe that $I \not\subseteq k$; if w were analytic, so would be I , a contradiction. So in both cases A is not analytic. Hogg, who was born and raised in Scotland, was recently asked by the Scottish Gaelic Society to come to see how they are with Gaelic language on a visit to the country. "When I was in my teens I had to stay for a few weeks in Glenfinnan, a village in the Highlands, in summer, and if I recall correctly, I was taken around by my parents' landlady to be shown around," Hogg said. "One of the things she showed me was a line of students going over the pass to go to school. A lot of them had Gaelic accents and she said 'there are no schools here.' But that changed. The English language schools opened and they changed the emphasis and they have Gaelic as a medium for teaching in the schools." Hogg says there are now more than 40 schools in the Highlands of Scotland where Gaelic is the medium of instruction. There are also two universities. There are also good numbers of Gaelic-speaking students attending the universities of St. Andrews and Glasgow. Hogg says all this is because Gaelic is not banned as a medium of instruction in the schools. "On the island of Man there are about 60,000 people who speak Manx Gaelic," Hogg said. "They are a Gaelic-speaking island in the Irish Sea off the coast of the west coast of Scotland. When I was growing up in the 70s we used to use Manx Gaelic and we would speak to friends in Ireland and England. When I was a boy in the village of Glenfinnan and St. Columba's Catholic College there were about 40 students there and there were about five of them who would have come from Man
