Creating Lines and Circles Use the Line and Circle tools to draw straight lines and curves and to create arc and ellipse objects. To create a new line, select the Line or Arc tool from the toolbox and start drawing. You will see the cursor appearing as a pencil or an arc tool. When you finish drawing the line, the cursor disappears. The line is set to a standard width, which is most often 1/64 of an inch. You can change the line width by selecting the width button on the line or arc tool bar. To create a circle, select the Circle tool from the toolbox and start drawing a circle. The cursor will disappear when you finish drawing. The line or arc tools can be used to make a series of straight lines or to create arcs and ellipses. To create a single arc, draw a line from one corner to another corner of a rectangle. When you complete the line, the cursor will appear as a curved line. You can control the arc with the mouse. Drag the mouse to set the center point of the arc. The mouse position will automatically be recorded when you draw a straight line.
