AutoCAD Architecture AutoCAD Architecture is a desktop 3D CAD software product of Autodesk introduced in 2012. It is meant for professional architecture and engineering design as well as general engineering, precast and architectural design. This product has been endorsed by the American Institute of Architects (AIA). AIA generally looks for 3D CAD solutions that are truly a platform for design collaboration. AutoCAD Architecture is part of Autodesk Complete Architectural Workflow (CAW) suite, which includes a 2D drafting, 2D and 3D modelling and visualisation products such as AutoCAD, Inventor and Civil 3D, as well as associated products such as Coarse Grained Project Server (CGPS), Architectural Database Manager (ADB) and others. On January 15, 2012, Autodesk announced a strategic partnership with HOK, a construction and engineering consulting firm, and the largest U.S. general contractor to create a unified platform for design, engineering and construction (D/E/C). Autodesk designed the architectural products and HOK took care of the construction of the buildings. History As a result of many years of co-operation with Japan's Fujitsu Consultants, John Warnock of Visual Data Systems and Dave Everitt of Decision Datacom created a collaborative workstation for architecture on 30 October 1987. Warnock and Everitt met and formed Visual Data Systems with the stated goal of designing a new workstation for architecture. However, while waiting for the new workstation to be designed, they continued to develop an architecture-only product that they presented to management at Decision Datacom. The computer they built together was named Acis as a joke on the classic architectural media Acis, or the Acropolis, in Greek. A Japanese partner, Fujitsu, had also been waiting for an architectural workstation to be developed and had their own experiences in that field. The first Acis 2D drafting system was released on December 9, 1987. The name Acis was chosen because it meant "true" or a1d647c40b
