In the February 1982 issue of Autodesk Review, Brett Smith wrote: "The task of preparing a

complete set of blueprints for a new house takes about five weeks. The same task in the 'old days' might take a couple of months." By 1983, Smith stated that AutoCAD was being used by "50,000 architects and engineers." By 1993, a major survey had found AutoCAD "being used by over 80,000 architects and engineers at a rate of one per architect or engineer in the survey area." An August 2010 article in New Tech Times cited a new survey stating that: "Nearly four in five

survey respondents (79.6 percent) have used AutoCAD software in the last year." AutoCAD is used by designers, engineers, architects, drafters, quantity surveyors, and other professionals working in many fields including home building, construction, automotive, manufacturing, interior and exterior design, landscape architecture, and others. AutoCAD users may be architects, engineers, interior designers, contractors, building inspectors, quantity surveyors, and

interior designers. Features AutoCAD is available as a stand-alone desktop program or as a licensed component of AutoCAD LT, which is available in several editions and platform types. Users may purchase single-user, client-server (hosted) versions, or the most-popular and well-established perpetual licensing model, which enables a user to install AutoCAD as a stand-alone application on any desktop or laptop computer or use it as a licensed component of the

AutoCAD LT suite on a workstation. It can also be used on Apple and Android mobile devices, and as a web app. AutoCAD and the AutoCAD LT software are used by nearly 200,000 architects and engineers. Home Use AutoCAD can be used by home users to create such things as full-scale architectural and engineering drawings, house plans, floor plans, kitchen and bath design and specifications, landscaping designs, and much more. By using

AutoCAD, a user can quickly and accurately create 3D models of a wide range of projects, which may include additions, remodels, new construction, additions, demolition, and more. A user can also easily design an entire home or house project using AutoCAD. AutoCAD can be used to create AutoCAD DWG and DXF files, which are widely used in the architectural, engineering

Uses AutoCAD is used for architectural, engineering, drafting, construction, and manufacturing design. The benefits of AutoCAD include efficient preparation of drafting and design documents, and high quality design. However, the cost of AutoCAD and the need for a network connection to share documents and drawings often makes it inaccessible to home users. In 2005, the total market share of AutoCAD was 21%, by a March

2016 market report to Autodesk. Autodesk releases version 2016 which was released on February 19, 2016 for desktop, tablet, and mobile. AutoCAD Professional 2016 was released in December 2015 for desktop. In 2015, major vendor had very few of AutoCAD users. Companies like Autodesk, Bentley, CorelDRAW, SketchUp and many others. AutoCAD is used as a design tool by the United States military, particularly the US Navy. According to the Naval Research

Laboratory, the navy spends nearly a half a billion dollars each year on AutoCAD. In June 2014, Autodesk acquired the influential C-Gnome software. History AutoCAD was first released in 1987 by Autodesk, Inc. As of January 2018, Autodesk had sold more than 35 million AutoCAD installations worldwide.

According to ABI research, AutoCAD generated more than \$1 billion in revenue for Autodesk in 2013. On August 12, 2011, Autodesk launched AutoCAD

Architecture Edition, which is a free edition of AutoCAD that focuses on architecture. In October 2013, Autodesk said it would add a free feature for creating and editing architectural drawings from within AutoCAD. The architectural feature was launched on February 14, 2014. The features include a new tab in the ribbon for design tools, as well as additional options in the drawing toolbar, including being able to move the paper through certain paths. Former

Q: Angular component vs Vue component vs React component I am totally confused on which to use when and why. React has a component class and these components are rendered as HTML and works really well for large scale apps. When I see other frameworks like Angular and Vue, they have

their own components that are also rendered as HTML and serve as building blocks for other components. For Angular, it is basically a directive and for Vue it is just another component. I am not quite sure if this is correct or not. Should Angular or Vue components be used as directives? or should we use these Angular or Vue components only? What are the pros and cons of each? A: To make an answer that is useful to others I will start with Vue.js and tell you

my experience with it. Vue.js is a new 'framework' that started in 2015. It is the successor of
