Comparison to CAD programs AutoCAD is one of the main CAD programs produced by Autodesk. It is the flagship product of the company and is one of the world's most popular CAD applications. It offers the functionality needed to create architectural, engineering, and other related design documents. In comparison, the other Autodesk CAD programs offer a variety of features and functionality that are designed to meet different design needs. Some are designed for the creation of architectural and engineering drawings and include parametric modeling, dynamic dimensioning, and building information modeling (BIM). Others, such as Inventor, allow the creation of 2D and 3D solid models, may include 2D drafting capabilities, and are marketed primarily for industrial design and manufacturing. History AutoCAD was created in the late 1980s by Walter Shewhart of Verlok, an architectural firm based in Houston, Texas, who had previously developed the FlexDraw 3D system for 3D modeling. In 1987, Microsoft provided a \$15,000 grant to purchase the rights to the FlexDraw product. In 1990, Autodesk completed the acquisition of

The State Department, in conjunction with Facebook, Instagram, and Twitter, on Monday launched a website that lists the fake news posted in the course of 2017, going back as far as January 1 of that year. Though the website names certain websites and Facebook pages posting fake news, the website does not place any blame on those sites or Facebook pages. The United States has been the subject of a firestorm of fake news on social media since US President Donald Trump made a series of controversial statements regarding the Muslim ban. “Social media companies have a responsibility to remove disinformation, and they have failed to do so,” State Department spokesman Robert Palladino said in a statement. “Americans have the right to know what is true and what is not.
