

MouseTool lets you edit Paradox tables that were created in Paradox. MouseTool provides you with a tool to modify the data in these Paradox tables. You can use it to edit the fields in the table, change the primary key values or delete records. Before using MouseTool you need to have Paradox installed, so MouseTool has no setup. You can use MouseTool directly from the Paradox table in which you want to edit the data. MouseTool automatically finds and opens the tables you have previously opened in Paradox. If you need to open an additional table, you can easily copy the table address from the Paradox table in which you want to use MouseTool. MouseTool shows a table name in the title bar. In the upper-left corner there is a task list, which can be used to hide or unhide all windows. You can edit the fields in the table and the primary key values of the fields. You can also delete records. This operation will delete all the records from the table. MouseTool also allows you to sort the records in descending order, ascending order and to view the records in alphabetical order. You can also use the tool to find the fields that have the same primary key value. This feature is very useful, for example, if you want to find a field with a primary key value of '12345' for all records in the table, you can use the search function. This way you can find the fields that have the same primary key values. MouseTool allows you to use the clipboard to save the data. You can use the clipboard for copying the data of the fields of the table or for copying the entire table. You can also copy data from the clipboard to the table. MouseTool also lets you export the data in the clipboard to a Paradox table in the same format that it was created in. MouseTool can open the data in any of the formats supported by Paradox, including CSV, TXT, HTM, XML, XLS, SQL, MDB, PDF. You can also use MouseTool to export the data of the clipboard to these formats. MouseTool lets you find a field by its name or primary key value. In MouseTool you can also find fields that have a value that you have previously selected. MouseTool has many settings that you can access from the Options menu. You can disable the buttons on the tool for example. You can also set the font, text color and background color of the fields in the table. You can also change
