What's New in the?

This application allows the user to simulate the emergence of interference patterns (Young's experiment) by varying the parameters of a single plane source or two point sources. The application runs on MacOS, Linux, and Windows. The graphical user interface (GUI) is very simple and only allows one set of parameters for each of the simulated sources. A single

---

clicking on each wave is enough to add or remove the sources, in the simplest case, without modifying their parameters. It is also possible to run "multisources" simulations, and so to study the emergence of spatial coherence. Current state: \*

- Works for Java 1.5 and later \*
- Exports png files \*
- Save and restore state (source of old/new sources and of current simulation parameters) \*
- Display of results \*
- Debug \*
- English \*
- Spanish History: See corresponding file: history

Known issues: - Forming

---

interferograms with four or more sources is not possible - The first few days there were many "buggy" results - The user has to select the number of wavelengths by trial and error - The number of wavelengths depends on the frequency band - The user has to select the number of waves by trial and error - The user has to select the frequency band by trial and error TODO:

- Simplify the drawing process
- Improve the interface

Wikimedia Commons ===  
Changelog === \* Version 2.0 -  
Implement more options for  
the user to configure the  
simulation - Check for Java's  
update - Support for MacOS X  
- Support for Linux \* Version  
1.5 - Png export option - Add  
double click to undo - Check  
for Java's update \* Version 1.4  
- Fix in the calculation of the  
number of wavelengths for a  
certain frequency band - Fix in  
the calculation of the number  
of waves for a certain  
frequency band - Fix in the  
display of the graphical results  
- Fix in the selection of the

---

sources - Fix in the selection of the frequency band - Fix in the visualisation of the spatial coherence - Fix in the visualisation of the spatial coherence - Fix in the output of the application \* Version 1.3 - Fix in the display of the graphical results - Fix in the selection of the parameters - Fix in the selection of the sources - Fix in the display of the graphical results - Fix in the calibration of the sources - Fix in the display of the graphical results - Fix in

---

**System Requirements:**

A iMesh Server A iMesh Client A solid Internet connection. Desktop browsers are preferred, although the iMesh Client can run on mobile devices. Note: Viewer must be at least version 1.8.1 for Blackberry and Android, and version 1.7.2 for Microsoft Mobile, Windows and Symbian Contact Info: Please help improve this app by using the Feedback button, which may be found at the bottom of the device's touch screen.
