Display A feature in AutoCAD, AutoCAD LT, and AutoCAD MEP called show views, can be used to display content in non-standard ways, such as by rendering 3D objects as 2D drawings, or by enlarging a 2D object on a background image. The CADShowView command displays views from the current drawing set. For this to work, the 3D functions have to be activated. The show views feature uses basic drawing commands to construct a view. The command will display the contents of all open drawings, or a specified view of a single drawing. Show Views command This command is used to display the contents of the current drawing set in a new view. A view can be specified by name or by selection from a list of available views. A view must be specified in order to use the command. To open a view using the command, click Show Views on the command toolbar or press ctrl+shift+v. The selected view will appear. By default, all views are displayed with a checkbox that allows unchecking the drawing set. This means that the drawing set will always be active, and all view settings will always be applied. An example of a show views command Show dialog Show Dialog is a feature of AutoCAD LT and AutoCAD 2012. The show dialog command allows a drawing or model to be opened in another AutoCAD session. This is useful for importing or exporting a model. By default, this feature is off. To activate the feature, open the AutoCAD LT or AutoCAD 2012 program, and in the upper right corner of the screen, there should be an AutoCAD icon. Click on the icon. In the window that appears, there is an area called "Show dialog." Click on that to activate the feature. If no icon appears, check the box labeled "Show dialog" in the standard or user preferences. To open a drawing, click on "My files." From there, navigate to the file you wish to open. When the file has been found, click on "Show dialog" and then click OK. Features supported in AutoCAD LT and AutoCAD 2012 Currently there is no official support for configuring show dialog from within the program, but it can be done through AutoCAD LT and AutoCAD 2012's user interface. This application claims the priority of German Patent Document 100 44 438.4, filed Aug. 16, 2000, the disclosure of which is expressly incorporated by reference herein. The present invention relates to a control device for a vehicle for operating the vehicle in conformity with the signals of the vehicle speed sensor system in that a respective vehicle speed is estimated from a dynamic vehicle model and the signals of the vehicle speed sensor system, and that a vehicle speed reference value is generated from the vehicle speed reference value generator from the estimated vehicle speed and the signals of the vehicle speed sensor system. In the case of such a device, such dynamic vehicle models have been known for a relatively long time, for example, from the book "Autovariabilität" [Autovariability], by Karl-Heinz Holzschuher and Jürgen Keisler, 2nd ed., 1988, Verlag Deutscher Verlag fuer Automobilwesen GmbH, p. 17 ff. In the control device known from German Patent Document DE 198 15 647 C1, a vehicle speed reference value is generated from a vehicle speed reference value generator from the estimated vehicle speed and the signals of the vehicle speed sensor system. To estimate the vehicle speed, in the case of this known control device, a dynamic vehicle model which simulates the actual behavior of the vehicle is assumed and the vehicle speed is estimated from the simulated vehicle behavior. It is an object of the present invention to improve the vehicle operation of the control device such that the safety of the vehicle operation is improved. This and other objects and advantages are achieved by the control device according to the invention in which an estimated vehicle speed reference value is calculated from a desired and a detected vehicle speed value, and from the
