The program has been designed to let the users get started immediately. The application

### What's New in the?

NXPowerLite's optimization technology does a comprehensive and flexible analysis of documents on a server or user system, while its interactive user interface allows the user to monitor the progress and results. Its flexible and extendable algorithms for document classification will help you prioritize your users' document collection based on their needs and preferences. NXPowerLite uses the most modern and powerful statistical methodologies to detect a large variety of faults, ranging from simple spelling mistakes to more complex forms of document alteration or manipulation. A dedicated folder tree view allows you to easily browse your documents and to preview their content in great detail. By using an object comparison tool, NXPowerLite can quickly identify and locate a document that does not match its file's characteristics (i.e. the name or file type). A document scanner will then allow you to add this document to the process. You can create schedules for your users' documents to ensure that they are regularly processed. There is even a possibility to let you control the process through an event log. NXPowerLite allows you to export the results of your analysis as standard ASCII files, PDFs or HTML files. It allows you to control the export, either through a simple step-by-step Wizard or a flexible and extendable script. In addition, you can also export XML files for further information. For additional flexibility, NXPowerLite can also be used to process text files directly, from within the GUI. This is useful for users who want to process their documents in batches, without having to be connected to a server. Requirements NXPowerLite is free software. It can be run from a standalone installation CD or from any other installation CD (DOS, Windows, Linux, Unix) of your preference. Source code: This program is distributed as source code only. This means that you can compile the program and run it on your own system. If you wish, you may also change the source code of NXPowerLite to provide a better document analysis solution for your users. Licensing: NXPowerLite is distributed under the GNU General Public License (GPL). This means that the source code can be downloaded and modified by anyone free of charge. If you need more information about this program, please see the About.txt file inside the distribution. Source files: The source code for NXPowerLite can be downloaded from the download section of the xtk2 homepage. Installation: If you are using a normal installation CD (DOS, Windows, Linux, Unix), simply run the setup program. If you are using a network installation CD (PC, Sun, Microsoft), download the program, open the resulting ZIP file and run the Setup program. If you need more detailed installation information, please refer to the README file inside the distribution. Support
