When customizing a drawing to meet individual requirements, a designer may edit the original drawing in a number of ways. The functions and commands to accomplish this are called the DesignCenter. Among other things, the DesignCenter is used to adjust the picture display to suit particular needs, to adjust the viewport, to open and close drawing windows, and to perform other operations. When a drawing is created, a number of standard elements are included. These include the standard drawing header information; the project name, year, and other data that is entered by the author; the title and key of the drawing; and a reference to the template that is used to generate the drawing. The drawing header includes information about the author, copyright information, references to other files, the project name, the drawing title and key, the company name, the year, the drawing number, and the client name. ## Displaying Drawings in the DesignCenter * * * **NOTE** The following assumes you are familiar with the DesignCenter. Refer to Chapter 12, Customizing AutoCAD Activation Code, for a brief overview of the DesignCenter. There are two ways to access the DesignCenter, and the choice of which to use depends on your circumstances. The fastest method is to access the DesignCenter from a command line or from the Windows Explorer context menu. To access the DesignCenter from the command line, type **dc** at the command line, and press Enter. (For more information on the command-line interface, see Chapter 1.) The DesignCenter opens. Figure 13.1 shows the default view of the DesignCenter. **Figure 13.1** Default view of the DesignCenter To access the DesignCenter from the Windows Explorer context menu, right-click on a drawing in Windows Explorer. From the resulting menu, select Open. The DesignCenter appears. Figure 13.2 shows the context menu and the default view of the DesignCenter. **Figure 13.2** Opening a drawing in Windows Explorer Another way to access the DesignCenter is to double-click a drawing in Windows Explorer, and then double-click the drawing again in the DesignCenter. ## Using the Standard Toolbars As discussed in the previous section, when you double-click a drawing in the Windows Explorer, the DesignCenter is opened. The standard toolbar that is included in AutoCAD is seen in Figure 13.3. The following list describes what the various buttons a1d647c40b

Total body water, haemoglobin, plasma volume and packed cell volume were measured using clinical techniques, and total body potassium was measured by the whole body counting method. These measurements were repeated before and after a malaria episode of about 5 weeks duration, during which Plasmodium falciparum was isolated by light microscopy from the blood. After the episode of infection, the blood volume was less (P less than 0.05) in children with an acute infection than in healthy controls. There was no significant difference in blood volume between children with chronic malaria and controls.Q: Rails 4.2 - redirecting to page with ajax I want to make AJAX call with Javascript onClick, and then in action I want to redirect to the page that I have made in controller.
