Contents Overview AutoCAD is a computer-aided design (CAD) software application used by architects, engineers, and others who design in three dimensions. History The first version of AutoCAD was released in December 1982 as a standalone desktop application for Intel 80x86 processors running on microcomputers such as the DEC/PDP-11 and the IBM PC. AutoCAD was originally developed by Dave Jones of Autodesk. In 1990, AutoCAD was ported to the MIPS architecture. That port was not compatible with the x86 version, and the last version with support for the x86 architecture was released in 1994. AutoCAD is available as a stand-alone application for Windows, Windows CE, macOS, Linux, Android, iOS and other Unix operating systems. Development and licensing AutoCAD is a commercial application, and is distributed with a variety of optional features. Use of AutoCAD requires a CAD license from Autodesk, which is provided as a subscription service. Other add-ons A number of add-ons are available, including: Autodesk Design Review (ADR) Autodesk DWG Viewer (DWGV) Autodesk Inventor (DST) Autodesk Revit (DST) Autodesk Vault AutoCAD Element Family AutoCAD 360 AutoCAD Map 3D AutoCAD Map 3D Air 3D AutoCAD Map 3D Air 3D Architectural AutoCAD Map 3D Architectural Product Model AutoCAD Map 3D Architectural Site Model AutoCAD Map 3D Architectural Site Plan AutoCAD Map 3D Architectural Site and Construction AutoCAD Map 3D Architectural Site and Construction Model AutoCAD Map 3D Architectural Site Plan and Construction AutoCAD Map 3D Architectural Site Plan and Construction Plan AutoCAD Map 3D Architectural Site and Construction Plan AutoCAD Map 3D Architectural Site and Construction Model AutoCAD Map 3D Architectural Site and Construction Model AutoCAD Map 3D Architectural Site and Construction Plan AutoCAD Map 3D Architectural Site and Construction Plan AutoCAD Map 3D Architectural

In 2008, the Autodesk provided a product line of AutoCAD release with an object-oriented programming interface based on the new generation of AutoCAD's original programming interface (API). This API became known as ObjectARX, and it was replaced in AutoCAD 2010 with the Component Object Model (COM) programming interface. Autodesk also has a version of AutoCAD for the Microsoft Windows OS called AutoCAD LT. Format AutoCAD files are known as DXF format (Draft Exchange Format). The format is proprietary and registered to the Autodesk. The files contain information about the drawing and the data that is related to the drawing such as 2D or 3D coordinate systems, lines, arcs, curves, text, dimensions, drawing layers, blocks, and linetypes. DXF may have two types of format: Microsoft Office format (.dwg) and AutoCAD format (.dxf). The former format is compatible with both Word and Excel, and the later is compatible with AutoCAD. DXF files may also be encoded in ARCFOUR, ASCII or Unicode text format. There are multiple types of DXF files, including: 2D drawings, 2D line drawings, 3D line drawings, point clouds, 2D surfaces, 3D surfaces, spline curves, vector objects, 2D and 3D solids, CAD blocks, The 2D drawings may be grouped into: Drawings Parts Print and Design Sheet Set Drawings A drawing is usually defined by the start and the end point in 2D or 3D space. Additional information about drawings includes shape definitions such as lines, arcs, ellipses, polygons, and more complex geometric shapes. The line data is usually stored on paper or on a printer, while the arc data and other geometric shapes are stored directly in the file. A drawing may have multiple layers, and each layer has a separate linetype which is used to display the layer. Parts Parts are a collection of 2D and 3D elements in a drawing. A part defines the start and end points of the element, and the lines or surfaces contained within the drawing. Multiple parts can be stacked on top of one another, and they can be linked together through their start and end points. 3D lines A line in a 3D drawing is ca3bfb1094

Q: How to use mapForKeyPath to get values from multiple NSArrays I have 3 NSArray's: NSArray* animalCats = @[@[@"cat1", @"cat2"], @[@"cat3", @"cat4"], @[@"cat5", @"cat6"]]; NSArray* animalDogs = @[@[@"dog1", @"dog2"], @[@"dog3", @"dog4"], @[@"dog5", @"dog6"]]; NSArray* animalBirds = @[@[@"bird1", @"bird2"], @[@"bird3", @"bird4"], @[@"bird5", @"bird6"]]; I need to show the animal name from these 3 arrays based on the values in animalCats, animalDogs, animalBirds. Here's my attempt so far: NSString* animalName = [NSString stringWithFormat:@"No animal %@, %@, %@", animalCats, animalDogs, animalBirds]; animalName = [animalName stringByReplacingOccurrencesOfString:@" " withString:@""]; This gives me a nice overview of all the 3 arrays, but how to I compare the values with the array names? A: NSPredicate* pred = [NSPredicate predicateWithFormat:@"self CONTAINS[cd] %@", animalCats]; NSArray* animalCatsArray = [NSMutableArray arrayWithArray:[animalCats filteredArrayUsingPredicate:pred]]; //... the same for the other arrays NSString* animalName = [
