Go down and right You're at the end of the level now. Just jump up and you'll reach the key. Go down and left You should see the key already. Jump up to get it. Kenny Price excel macro to check if the password is already in the database or not with the functions I have included. 1) The cell directly on the right side of the previous row that is checked for "The Password is In the database". The cell directly on the left side of the column in which the data is entered. 2) The cell in the previous row from the data that was checked for "The Password is In the database". 3) The cell in the previous column from the data that was checked for "The Password is In the database". 4) The value of the data that was checked for "The Password is In the database". if there is only one row in the database, then follow the below exsamples. 'check if the password is in the database on error resume next on error goto 0 'the password is in the database User Db 1 2 3 4 'the password is in the database UserDb There is no longer any check for password. Now the code below will connect to the database. if database nam = "userDb" ' connect to the database open excel 'make sure that the password for the database has been set fetch row "select password from userDb where username = '&name' if ine(password) = "" then "the password is in the database UserDb 'if the password is not in the database UserDb If password is correct then place the following variables in it. ' other values If password is incorrect then 'the password is not in the database' so do not place the password in the connection string like below. UserDb 'else UserDb else UserDb Open Excel 'the password is in the database UserDb fetch row "select password from userDb where username = '&name' if password is correct then ' other values UserDb 'else User d0c515b9f4
