Overflow is an action-RPG RPG in the tradition of classic RPGs and the genre's most popular protagonists, Sora and Minnie! A game of light and action. . A game of emotions The story was written in the cherry blossoms of spring, where a boy named Sora returns to his memories of the past with a young companion named Minnie. The story is about how Sora is reincarnated in the present. He had been a fearless young man who fought against the dark forces of the universe. But, returning to the present world, his body was fatally injured and he was about to die. At that moment, Minnie—the charming and cheerful girl who thought she was a human—was sent from the fairy tale world to the real world. Their meeting marks the first of many battles as he fights to protect Minnie and find a way back to the fairy tale world. New adventure every day In Overflow, players can freely switch between battles and control any party members. Every party member—Sora, Minnie, and the other characters—will show a different style of play. But, a party of four will be enough to complete the game and enjoy the story. □□□□The title of the game, Overflow, doesn't mean something "overflow" with life or that Sora will run away. Rather, it is a special symbol with a special meaning. And for Sora, the special meaning is to avoid dying, and for Minnie, the

special meaning is to escape from the village and live freely. What was Sora's past? - Raised in a world of monsters and people, Sora was in danger of disappearing. And then one day, an unknown fate appeared and brought him to a different world. In the "real world", he met Minnie and became reborn. At this moment, Sora had been reborn and faced a new dream: to find the people he had lost. The world where everyone he knew was gone Sora is transferred to a place of ruins in the country called KK Central. Everyone has been missing since "The End". The reason for the accident was not unknown to Sora. Sora is a mercenary, and he was hired by the party to protect Minnie from a c9d1549cdd

## **What's new:**

**As some of you may have noticed or at least for we Ham radio operators - voltage splitters, VTA are down and not working - the tv and radio stations are up and running with standard programming. Someone created a virus/impostor called "Tom", it has been spreading worldwide since at least July 25th and I have received several reports. The virus or virus is not affecting any specific computer system but some high end PC's and certain Commodore PET computers. It will reveal "TOM" in the upper left corner of the monitor about anywhere it is displayed as the "infected" computer returns to standard 80x50 screen resolution. This infected computer can not connect to the Internet and some of them are even IP blocking their IP addys. The virus seems to generate multiple document file names and is useless to any task beyond clicking the "Send" option. I've had many people tell me that they are getting their infected machines from repeaters, friends, email - just about every place one can get a pc. An interesting tidbit, the virus or Virus, is called "Tom" which is quite appropriate as, why a virus name like Tom!! I will encourage any who received "Tom" to post comments here with your name, time and method of introduction. Is this virus or virus possible to reverse in any way? Troy Pete At least as far as I can see, there is a portable version of the virus as well and it seems to spread by a usb key/wifi thing. -Pete Troy Looking at my monitor, the Tom instance is in the upper left corner. I did not note how long the Tom signal was on the monitor so it may have been for a few seconds; it certainly wasn't visible for longer - or that I have reason to think it was a virus, or that I was experiencing a particular type of malfunctioning. Getting back to the generic definitions of viruses. The purpose of a virus, in simplest terms is to embed itself in a computer so it can later be identified as a virus (usually by the virus/antivirus software), and upon active detection, operate to introduce changes into the system. At the time, I was hesitant to call this a virus, because I suspected I had created the virus in the first place. But**

Iridium is a 2D shoot 'em up (apparently similar to Uridium) with plenty of enemies and unique elements such as parallax scrolling. It also features a currency shop between sectors allowing upgrades and more to be purchased, items that are dropped during a level and not on screen can be picked up and used to alter the level layout. The game is played like a traditional 2D shoot 'em up however the screen is always in motion when the player does the action.

This should be interesting. I'm just not sure it'll be competitive. They have some potential, but aside from the OL, they don't have much experience, and RBs can be hard to come by when recruiting, and the OL isn't that deep, unless you want to go for a couple of 4 or 5 star guys.

Yeah, I was going to say. I'm not saying they can't compete; just saying I don't think they have a good chance.
