Tropy is an excellent application designed for organizing research photos. With Tropy, there are various ways you can organize the photos and describe them: either using Explorer, Lists, Tags, or Notes. If you need to record metadata to the photos, you can do so in the File Metadata tab of the Photos screen. You will often combine the images into groups, where you can either name them or define a location for them. After you have created your groups, you can describe the content in the Groups view. Using a drag and drop method, you can add groups to a list, which is the default for viewing and labeling your photos. By creating a list, you can search for all the photo groups you created, as well as view all of them at once. You can also use the Notes window to add notes to the photos. With a drag and drop method, you can also add photographs and notes to existing groups. For convenience, Tropy also allows you to select a portion of a photo and label it with a comment. Tropy has a split-screen interface with the left side providing a thumbnail preview of the photos, and the right side allowing you to quickly enter notes and metadata, or to view any existing tags. The Preview option allows you to quickly see which files you have selected and where they are located. In Explorer, the photos are sorted by path and then by date taken. The Background Music option allows you to play the music when viewing the photos. From the windows, you can sort the files from old to recent, or by size. In addition to Explorer, you can also use the Files option, which allows you to sort by file type, as well as by file name. You can also instantly open any photo into the Notes tab using the Add button, which is located below the photo. You can also quickly

remove a photo or a note from a group using the Delete option. Performing group editing, as well as basic photo editing is done right in the Notes tab. You can crop, rotate, or overlay images. Tropy Features: View the full list of the current tags that are related to the photos. Click a tag to edit it. Click the plus sign to add a tag, or click the minus sign to remove a tag.
