ShiningHotelLostinNowheretorrentfull Fix

Same as ShiningHotelLostinNowhere, except that when i fill out the request, the page disappears and the background is black. As well as it takes forever to return the page. I know this should be a question for the chat room, but is there a way to display a message in the terminal when this happens, or to run a program and still have the output stream by which the message is sent displayed? I have a long list of such pages to fill out, and would like to have them all running on one terminal, and be able to see all output at once. A: If you run your request in a docker image you can get the answers from the local machine without accessing the remote web server that's hosting this site. Here's a dockerfile that reproduces the issue: FROM ubuntu:16.04 RUN apt-get update -q && apt-get install -y xvfb wget RUN wget --progress=dot:always -O - | bash # Press Enter to get the page Now just run docker build and execute docker run. You should see something like this: \$ docker run -it -p 8080:8080 example localhost 8080 1 myuser:~ \$ wget --progress=dot:always -O - | bash 2020-12-17 16:26:04 URL: 404 Not Found 2020-12-17 16:26:04 'GET /get.php' http get get /get.php Got past the server. 2020-12-17 16:26:04 http: GET /get.php: unknown error starting to retry request /usr/local/bin/bash: line 63: http: unknown error starting to retry request HTTP/2 200 /usr/local/bin/bash: line 63: `': No such file or directory 2020-12-17 16:26:24 'GET /get.php' http get get /get.php Got past the server. 2019-11-18 14
