Free Kuptimi I Lektyres Agimet E Kaltra Qamil Batalli PDF eBook Early diagnosis of hepatic fibrosis with three-dimensional ultrasound. Hepatic fibrosis is a major determinant of the outcome of chronic liver disease and the most accurate method of assessment of liver fibrosis is histology. In clinical practice, this may be impractical and where liver biopsy is impractical, non-invasive tests may be useful. The purpose of this study was to evaluate whether three-dimensional ultrasound can accurately diagnose liver fibrosis. Thirty-seven patients with chronic liver disease were examined with three-dimensional ultrasound. Compared to pathology, the diagnostic accuracy was 90% (18/20) for staging of liver fibrosis. Three-dimensional ultrasound is highly accurate in the diagnosis of early hepatic fibrosis, and may serve as an alternative to conventional ultrasound or computed tomography for the diagnosis of early fibrosis.Q: HTML5 Media Capture - Launch Image I am currently trying to launch a camera or webcam using the HTML5 Media Capture API. I am having an issue where the launch window shows up but it doesnt launch the camera. My code looks like this: and my javascript like this: navigator.mediaDevices.getUserMedia({ video: true }).then(function(stream) { video = document.getElementById('myvideo'); video.oncanplaythrough = function() { is\_previewed = true; }; video.src = window.URL.createObjectURL(stream);
