Features Overview To meet the needs of different design and drafting workflows, the AutoCAD software includes the following major components: PERSONAL ROLES The user role determines how you operate within AutoCAD. In AutoCAD, you can work in several modes:

- Drafting is a 2D drafting environment where objects are created or manipulated to form 2D and 3D drawings. Objects, such as lines, circles, and other geometric shapes, can be used to create everything from simple 2D drawings to complex structures that can be imagined as a computer-aided design (CAD).
- Architectural is a 3D environment where objects are placed or used to visualize and analyze architectural models or visualizations.
- Presentation allows you to create 2D presentations with all the standard features of a presentation tool. You can create 2D layout tools and navigate to 2D views of drawings or other presentations.
- Publication allows you to print, scan, and publish 2D drawings. You can use PostScript-like commands to convert a drawing into a printable file or use the Print option to control the placement of pages on a printer. To optimize your publication, you can use the layout tools and navigate to 2D views.
- Modeling allows you to work in 3D space with many features from modeling and design.

Architecture A software architecture based on the UML standard for modeling and development of architecture. It was introduced in AutoCAD 2000 and incorporated in AutoCAD 2002. Dimensions Dimensions are properties in a drawing that can be measured. Dimensions use the properties of lines and polylines to define the size and location of objects in the drawing. There are two ways to specify dimensions: visually and as a dimensionally-arranged object. The visual dimensioning mode lets the user specify the dimensions by visually indicating the position of the dimension on the drawing. A dimension object in a drawing is a line, text string or polyline that serves as a reference for users and other features in the drawing. A dimension object defines a characteristic of a line or polyline object in the drawing. For example, a dimension object can define the width, distance, length or area of a line or polyline. Georges Perec's 1978 novel, *The Foundation Pit*, is set in a dark and gloomy labyrinth of the human psyche. It is a novel in which the main character finds himself mysteriously trapped in a small room in a Parisian tenement building, where he has been sentenced to a life sentence without parole. Perec has him take a strange journey across Paris in search of the mysterious room, only to find that it cannot be located. The book's plot is as follows: For this project, I had to create a convincing narrative in which a man, the main character, finds himself suddenly, and with no means of escape, confined to a small room in a Parisian tenement building. The room is covered in a dark, thick red wallpaper, and it has windows only on the upper level. I used the grid to help me create a quick, sketchy thumbnail of what this room would look like. It worked well, as you can see below. You can then use that as a place to start drawing a more detailed concept of the room, or even start to plan out the surroundings. In the image above, I used shapes to help figure out the structure of the room. The contour of the room itself is essentially the plan, so I used the plan to help figure out the contours of the room. The top image is from the quick thumbnail. The bottom image is from the final finished concept. The images were done with traditional pens and ink on vellum. If you are interested in creating your own storyboards, a grid is an excellent tool. You can
