add a class name to every element in a list using XSLT? I'm trying to add a  
class to a list of elements to make them look the same, even though they  
are pulled from a database and are different for each item. In this  
example, I'll be pulling a page from a database, but it's only the first  
element that needs to be different. text text And I want this: text
